

ECONAUTICS

*WE'RE TRANSFORMING HOW COMMUNITIES GROW FOOD, EDUCATE,
AND RECLAIM UNUSED AND ABANDONED URBAN LANDSCAPES.*

Founded in 2012, Econautics is a Fort Worth, TX-based 501(c)(3) nonprofit dedicated to conservation, urban agriculture, and practicing the sciences of permaculture and agronomy. Through our innovative Living Laboratory approach, we transform underutilized urban land into dynamic learning environments that demonstrate sustainable, organic food production.

Our hands-on educational model creates meaningful partnerships with educators, communities and partner organizations, inspiring the next generation to pursue careers in agriculture while empowering North Texas communities—and beyond—to cultivate holistic and sustainable food systems in their own backyards and gardens.

OUR VISION:

is for a future where all children grow up with access to an abundance of diverse and nutritious foods, as well as the knowledge and skills to steward Earth's natural resources for generations to come.

OUR FOCUS:

is to address environmental, health and economic disparities prevalent in under resourced areas through these Living Laboratories and through strategic partnerships with trusted organizations already embedded in the community.

OUR MISSION:

is to plant the seeds of healthier, more resilient communities by creating Living Laboratories for the exploration, study and teaching of sustainable agricultural practices.

OUR PARTNERSHIPS:

with educators, health and wellness professionals, landowners, agriculturalists and conservationists, provides collaboration that extends beyond our hands-on living laboratories. These partnerships, joined with our team and numerous volunteers, unites all in fulfilling our mission, vision and focus.
